## **SLIDES IN NEED OF RESURFACING**

When a fibreglass slide is showing signs of wear and needs resurfacing, the materials to use are 2 packs of polyurethane to be mixed on site and spray painted on. A known brand is Evergard Permagard. It is suggested that this product be purchased from a reputable paint supplier.

Also, it is suggested that boat repairmen know about costings associated with fibreglass.

However. It is suggested that the cost of resurfacing needs to be checked against the cost of replacement, as it is generally cheaper to replace a slide rather than resurface.
